

Want to take your big screen on the road? Now it is easy, practical and safe.

January 19th 2008 – Quartzsite, Arizona – HDTV RV Solutions introduces the HD Locker[™] for RV owners.

RV owners have had a dilemma of late. If you wish to watch your new flat panel TV in your RV, you have found a way to stow it while you travel, then set it up once you're camped, or you have tried using a home wall mounting system in your RV which will likely fail soon after you travel your first rough road..

Now HD Locker has solved the problem for thousands of RV owners. The new HD Locker mounts a 37" flat panel HDTV safely to the ceiling of any RV. The HD Locker, shown for the first time at the Quartzsite RV show, (January 19th through the 27th) holds the HDTV snug to the ceiling of the RV for travel, and flips down for optimal viewing when parked.

One of the keys to the success of the HD Locker is the patent pending mounting technology. This mounting system allows the HD Locker to support up to 800 pounds without deflecting or damaging the RV roof. This in an 8:1 safety factor since the HD Locker weighs about 100 lbs with the TV installed. Another key feature is the integrated pneumatic counterbalance that assists in lowering and stowing the TV.

Mounting a flat screen TV in an RV has never been easier. The four "roof plate sealing" mounting fixtures can be adjusted to several patterns to avoid interference with key elements in your RV roof such as A/C units, ductwork or power lines. The HD Locker can be mounted so that it doesn't quite touch the ceiling to allow for interior features such as lights and air vents. The HD Locker is field adjustable to permit the unit to slide up to 24" horizontally front to back so that the most optimal viewing position is realized even in the most challenging installations.

“I am excited to introduce the HD Locker to the RV market, I have tested one in my motor home for over 4 months and 2,500 miles and I love it” said Brian Lewis, President of HDTV RV Solutions. Brian went on to say; “We wanted to road test it and make sure it was safe and secure before we introduced it here at Quartzsite. This product solves the problem all of us will have in February of 2009 when analog TV is gone for good. Where will I put a new digital flat screen TV in my motor home? The set I prefer will not fit in that little space where my old TV is now.”

Some of the benefits of the HD Locker:

- **The HD Locker lets you retrofit your rig without having to compromise with a small TV.**
- **The HD Locker is strong and sturdy which makes it safe. So safe, you can drive the roughest roads with the confidence that the investment you have in your TV will be protected.**
- **The HD Locker front cover can be customized to match any rig’s decor.**

About HDTV RV Solutions

HDTV RV Solutions is dedicated to improving the RV lifestyle by offering its technology and expertise in the HDTV space.
